SERVICE DISCLAIMER

Expanded uncertainties are calculated per ISO "Guide to the Expression of Uncertainty Measurement", (GUM) and reported as K=2 at approximately 95% confidence level. Michelli utilizes the Binary Simple Acceptance decision rule as described in ILAC G8 in determining pass or fail status, The decision rule used is Simple Acceptance as defined in ILAC G8 with measurement uncertainty value that will not exceed 50% of the manufacturer's tolerance. It is also the responsibility of the user to consider the measurement uncertainty when determining the instrument suitability. This is known as "Shared Risk." Any number of factors may cause the calibration item to drift out of calibration before the recommended interval has expired. Because there is no traceability for a Zero Mass, Weight, or Force value, readings taken at Zero are not included in the Michelli Scope of Accreditation.

Michelli Weighing & Measurement certifies test instruments have been repaired, if necessary and calibrated to published manufacturer specification with standards traceable to the SI Units through a CIPM-MRA signatory National Metrological Institute (NMI), to consensus standards, to ratio methods, or to accepted fundamental physical constants. Michelli Weighing & Measurement Quality Management System meets the requirements of ISO/IEC 17025, ISO 9001 and ANSI/NCSL Z540-1- 1994. This document shall not be reproduced, except in full without expressed written permission of Michelli Weighing & Measurement. Calibration reports shall not be used to claim product certification, approval, or endorsement by A2LA, NIST, or any agency of local, State, or Federal Government. Michelli utilizes digital signatures in lieu of physical ink signatures which are password protected.
